

### OUR COMMITMENT

FGJV values the natural environment and its cultural heritage and is committed to providing net positive environmental outcomes. We support ecologically sustainable development and will adopt responsible environmental practices in all our business operations.

### OUR APPROACH

FGJV addresses its commitment to environmental sustainability and conservation through the consistent implementation of its Environmental Management System and by the following:

- Comply with relevant legal and regulatory obligations, standards, licences and client requirements.
- Integrate environmental aspects into all project decision making, including planning, design, construction, and delivery.
- Enhance the awareness and knowledge of our employees, subcontractors, and supply chain to promote a shared culture of environmental accountability.
- Establish environmental objectives and targets, and transparently communicate our performance to ensure we continually improve.
- Focus on identifying and implementing opportunities throughout design and construction to identify and implement operational resource use efficiencies.
- Take proactive steps to prevent adverse environmental and heritage impacts.
- Minimise waste generation as far as reasonably practicable and prioritise the re-use and recycling of surplus materials.
- Investigate significant environment incidents and take immediate actions to prevent recurrence.
- Work collaboratively with all stakeholders to leave a positive environment and heritage legacy.
