### Acoustic terms and acronyms

AA	Acoustic Advisor
AMM	Additional mitigation measures – applicable where standard measures have been implemented and NML is still expected to be exceeded.
dB(A)	Unit used to measure 'A-weighted' sound pressure levels. A-weighting is an adjustment made to sound-level measurement to approximate the response of the human ear.
DPHI	NSW Department of Planning Housing and Infrastructure
EIS	Environmental Impact Statement
ICNG	Interim Construction Noise Guideline (Department of Environment and Climate Change 2009)
NCA	Noise Catchment Area
Noise level statistics	<p><math>L_{A90}</math> - The A-weighted sound pressure level exceeded 90% of the monitoring period. This is considered to represent the background noise.</p> <p><math>L_{Aeq}</math> - The equivalent continuous A-weighted noise level—the level of noise equivalent to the energy average of noise levels occurring over a measurement period.</p> <p><math>L_{A1}</math> – The A-weighted sound pressure level exceeded 1% of the monitoring period.</p> <p><math>L_{Amax}</math> – The maximum A-weighted noise level associated with the measurement period.</p>
NML	Noise Management Level
PPV	Peak Particle Velocity – Measurement of ground-borne vibration in units of mm/s
RBL	Rating Background Level - a single figure that represents the background noise level for assessment purposes
ROL	Road Occupancy Licence – granted by Transport for NSW and required for any activity likely to impact on traffic flow.
SWL	Sound Power Level - The A-weighted sound power level is a logarithmic ratio of the acoustic power output of a source relative to 10-12 watts and expressed in decibels. Sound power level is calculated from measured sound pressure levels and represents the level of total sound power radiated by a sound source.
SPL	<p>Sound pressure level - This is the level of noise, usually expressed in dB(A), as measured by a standard sound level meter with a pressure microphone. The sound pressure level in dB(A) gives a close indication of the subjective loudness of noise.</p> <p>A technical definition for the sound pressure level, in decibels, is 20 times the logarithm (base 10) of the ratio of any two quantities related to a given sound pressure to a reference pressure (typically 20 <math>\mu</math>Pa equivalent to 0 dB).</p>
Tonal noise	Noise with perceptible and definite pitch or tone
VDV	Vibration dose value – used when assessing intermittent vibration as it is sensitive to peaks in vibration acceleration and accumulates the vibration energy received over the daytime and night-time periods

## 1 Introduction

### 1.1 Overview

The Sydney Metro Western Tunnelling Package is being delivered by the Gamuda Australia and Laing O'Rourke Consortium (GLC) and includes twin nine-kilometre tunnels between Sydney Olympic Park and Westmead, excavation of two new metro stations, and a stabling and maintenance facility at Clyde (the Project).

During the Project, there is potential for nearby sensitive receivers to experience adverse impacts relating to noise and vibration. The project's utilises KNOWnoise™, a project-specific noise prediction tool, to prepare Detailed noise and vibration impact statement's (DNVIS) for site and activity-specific where it triggers MCoA D43.

This DNVIS has been prepared using KNOWnoise™ and addresses activities for the road enabling works to the Westmead Metro Station construction site as illustrated in Figure 1. These activities are proposed to provide additional access and egress points to the Westmead Metro Station construction site, while also alleviating construction traffic impacts on Bailey Street and Hawkesbury Road.

Given the ongoing development of the scope of works, the DNVIS for the LAW would be developed in 2 phases. This DNVIS covers Phase 1 of the works and is expected to occur over a total of four days during the school holiday period, subject to ROL's and environmental conditions during the delivery of works.

#### The Structure of this DNVIS includes

- Section 1.2 - Construction works and hours with justification for these works in Section 1.3
- Section 2 – Existing environment
- Section 3 – Assessment framework including noise and vibration management levels
- Section 4 – Construction noise assessment
- Section 5 – Mitigation and management, including consultation

### 1.2 Planned works

GLC plans to carry out the works described in Appendix A, which lists each assessed activity, its timing and proposed equipment. The proposed activity can be broken down into two steps:

1. NDD and footing excavation
  - 1B - Footing excavation (Saw cutting) - *Saw cutting would not occur concurrently with NDD*
2. Relocation and rewiring of existing traffic poles

Works are proposed to occur during standard, daytime and night time periods, subject to ROL's given the nature of the task and its impact to drivers and pedestrians.

### 1.3 Justification of the works

The work proposed as part of this assessment are critical for the delivery of the Sydney Metro Western Tunneling Package. The proposed works include activities such as utility adjustments, access/egress point improvements and relocating traffic poles.

Given the need to undertake these works within a main intersection in the Westmead Area, working hours would be subject to ROL's provided by the relevant Roads Authority. These works would also be completed in accordance with the conditions of respite stipulated by EPL L5.8 (e).

This DNVIS has therefore been developed in accordance with MCoA D43, given the predicted noise impact exceeds NML's and the High Noise Impact threshold, as well as because some elements of the works are required to be completed at night. This DNVIS therefore is being developed to determine Mitigation Measures necessary to be emplaced.

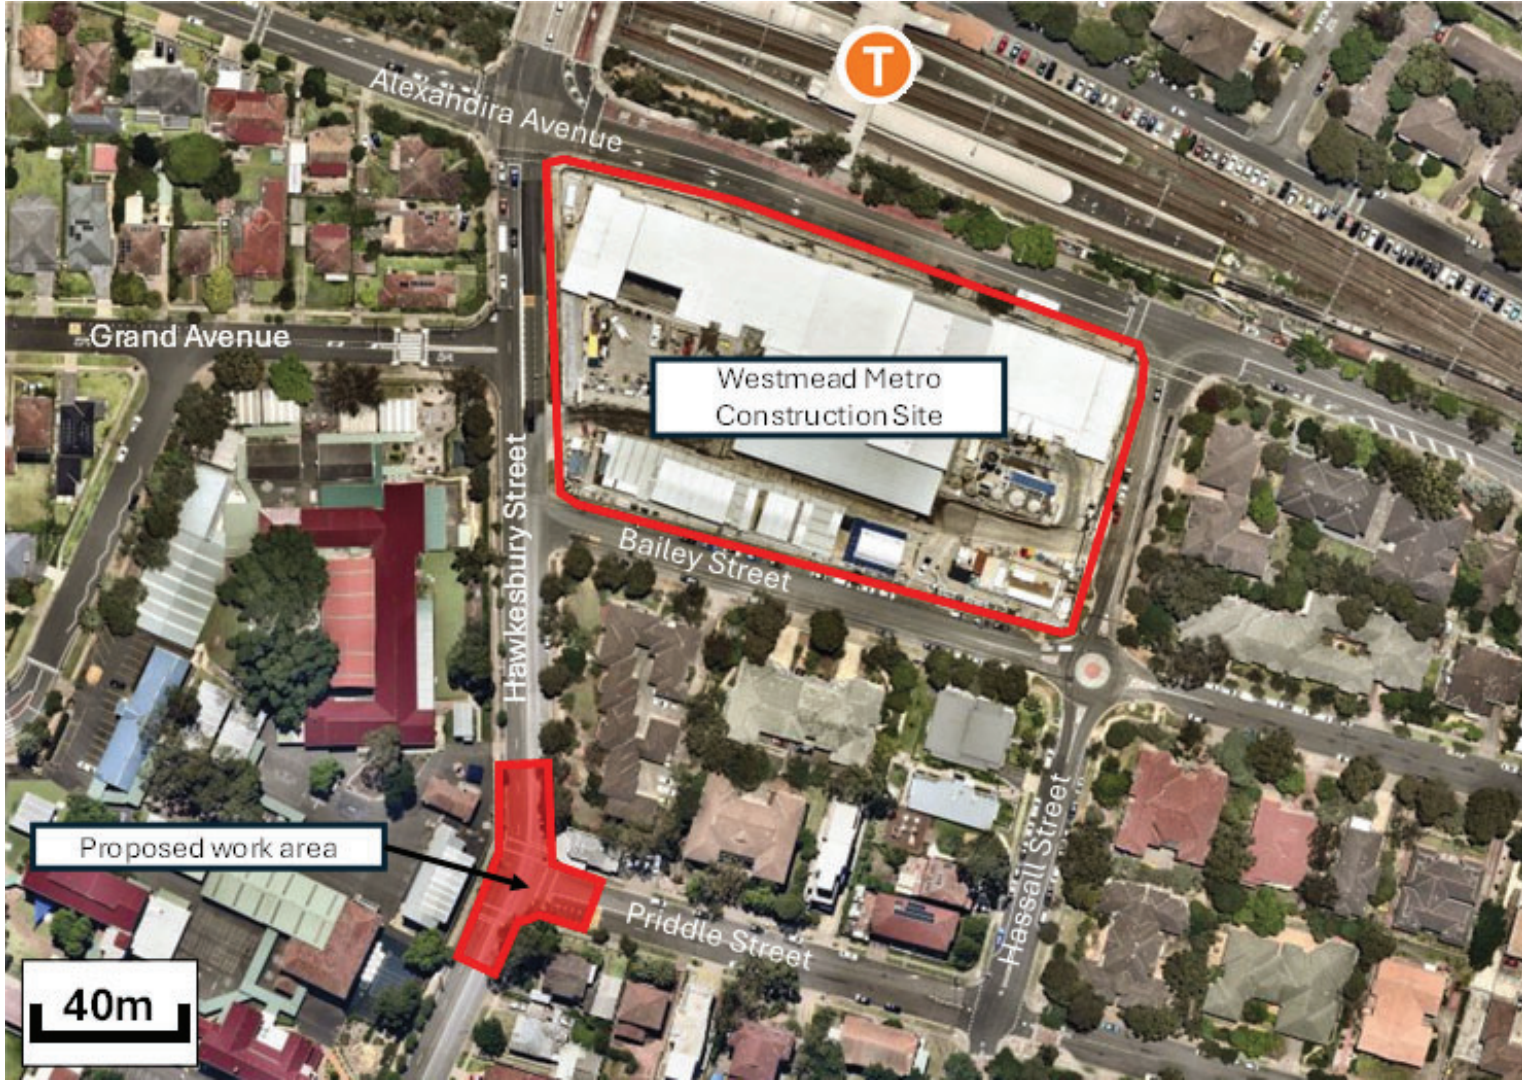

Figure 1 Location of proposed works

## 2 Existing environment

### 2.1 Sensitive receivers

The proposed work area is located in the vicinity of the Westmead metro station construction site which is bound by Hawkesbury Road to the west, Hassall Street to the east and Baily Street to the south. The proposed works (as depicted in Figure 1) are located specifically within the intersection of Priddle street and Hawkesbury road, and is bound by residential receivers to the east, and commercial receivers (a School) to the west.

Given the highly busy nature of the Westmead area, and the proximity of the proposed works to the Westmead train station, ambient noise levels in the area are generally heavily dictated by transportation noise from the surrounding road network and the existing rail line.

### 2.2 Noise catchment areas

To facilitate the assessment of noise impacts from the project and to apply representative Noise Management Levels (NMLs) to all receivers, receivers adjacent to the Westmead site has been divided into Noise Catchment Areas (NCAs). The Westmead area contains two noise catchments, NCA01 and NCA02 respectively.

NCAs group individual sensitive receivers by representative traits such as existing noise environment and potential exposure to noise and vibration from the Project.

NCAs established as part of the EIS are summarised in Table 1 and illustrated in Figure 1. Background noise monitoring has been completed as part of the EIS to apply appropriate NMLs to each NCA.

**Table 1 Summary of work areas, Noise Catchment Areas and land uses**

NCA	Location	Description
1	Westmead	North of the existing rail corridor in Westmead and mainly residential. 'Other sensitive' receivers include Westmead Hospital, Western Sydney University – Westmead, and Parramatta Marist High School. A child care centre and a number of medical facilities are to the north of the existing Westmead Station.
2		South of the existing rail corridor and mainly residential. Westmead Primary School is in the north of the catchment on Hawksbury Road.

### 3 Assessment framework

#### 3.1 Approved construction hours

Working hours are set by CoA D35 to D36 as summarised in Table 2. Use of power saws, rock breakers, drills and other tonal or impulsive activities are defined as annoying under the Interim Construction Noise Guideline (ICNG) and are ‘highly noise intensive works’. Works in this DNVIS are subject to different construction hours as stipulated by the Projects EPL, in accordance with CoA D37(c)(i).

**Table 2 Approved construction hours**

CoA	Construction activity	Monday to Friday	Saturday	Sunday / Public holiday
D35	Approved construction	7:00 am to 6:00 pm	8:00 am to 6:00 pm	No work (unless approved under EPL or out-of-hours work protocol)
D36	Highly noise intensive works	8:00 am to 6:00 pm <sup>1</sup>	8:00 am to 1:00 pm <sup>1</sup>	No work (unless approved under EPL or out-of-hours work protocol)

Notes:

1. if continuously, then not exceeding three hours, with a minimum cessation of work of not less than one hour.

#### 3.2 Noise assessment criteria

##### 3.2.1 Construction noise

The ICNG describes noise in excess of the background level as potentially having an adverse impact on sensitive receivers and increasing the likelihood of complaint. During standard construction hours, where construction noise is within 10 dB(A) of the RBL, impacts would be acceptable.

Where construction noise is more than 10 dB(A) above the RBL during standard construction hours, a residential receiver is considered noise affected and the proponent should undertake all reasonable and feasible steps necessary to manage the impact and consult with the affected community.

Above a  $L_{Aeq, 15 \text{ minute}}$  noise level of 75 dB(A), a receiver is highly affected, requiring consideration of additional mitigation measures including alternative accommodation in the night period.

Outside standard construction hours, construction noise at a residential receiver more than 5 dB(A) above the RBL is taken to be noise affected. Table 1 (reproduced from Table 2 of the ICNG) sets out the NMLs for residences and how they are to be applied.

In addition, annoying noise such as rock hammers, impact piling, or other impulsive noise sources usually result in greater annoyance than continuous construction noise. A 5 dB(A) penalty is applicable to such activities prior to comparison with the NMLs.

##### 3.2.2 Sleep disturbance

The CNVS requires maximum noise levels to be analysed in terms of the extent and number of times the maximum noise exceeds specific noise trigger levels, in general accordance with the Noise Policy for Industry (NPfI) (EPA 2017). These triggers are:

- $L_{Aeq, 15 \text{ minute}}$  40 dBA or the prevailing RBL plus 5 dB, whichever is greater, and the
- $L_{Amax}$  52 dBA or the prevailing RBL plus 15 dB, whichever is greater.

The NPfI also recommends the DECCW (2011) Road Noise Policy (RNP) be reviewed for further risk assessment. The RNP recommends maximum internal noise levels below 50–55 dB(A) are unlikely to awaken people from sleep and one or two noise events per night, with maximum internal noise levels of 65–70 dB(A), are not likely to affect health and wellbeing significantly.

**Table 3 Residential noise management levels**

Time of day	NML $L_{Aeq}$ (15 min) *	How to apply
Standard hours: Monday to Friday 7 am to 6 pm Saturday 8 am to 1 pm	Noise affected RBL + 10 dB	The noise affected level represents the point above which there may be some community reaction to noise.  Where the predicted or measured $L_{Aeq}$ (15 min) is greater than the noise affected level, the proponent should apply all feasible and reasonable work practices to meet the noise affected level.  The proponent should also inform all potentially impacted residents of the nature of works to be carried out, the expected noise levels and duration, as well as contact details.
	Highly noise affected 75 dB(A)	The highly noise affected level represents the point above which there may be strong community reaction to noise.  Where noise is above this level, the relevant authority may require respite periods by restricting the hours that the very noisy activities can occur, taking into account: <ul style="list-style-type: none"> <li>- times identified by the community when they are less sensitive to noise (such as before and after school for works near schools, or mid-morning or mid-afternoon for works near residences);</li> <li>- if the community is prepared to accept a longer period of construction in exchange for restrictions on construction times.</li> </ul>
Outside recommended standard hours	Noise affected RBL + 5 dB	A strong justification would typically be required for works outside the recommended standard hours.  The proponent should apply all feasible and reasonable work practices to meet the noise affected level.  Where all feasible and reasonable practices have been applied and noise is more than 5 dB(A) above the noise affected level, the proponent should negotiate with the community.

\* Noise levels apply at the property boundary that is most exposed to construction noise, and at a height of 1.5 m above ground level. If the property boundary is more than 30 m from the residence, the location for measuring or predicting noise levels is at the most noise-affected point within 30 m of the residence. Noise levels may be higher at upper floors of the noise affected residence.

Other sensitive land uses, such as schools and offices, typically find noise from construction disruptive when the properties are being used (such as during work and school times). The noise management levels for non-residential receivers set in accordance with the Interim Construction Noise Guideline are provided in Table 4. These levels apply only during hours when the non-residential premises are being used.

The difference between an internal noise level and the external noise level is about 10 dB(A), which provides a conservative assumption that windows are open for ventilation. Buildings where windows are fixed or cannot otherwise be opened may achieve a greater noise level performance.

**Table 4 Non-residential sensitive land uses noise management levels**

Land use	Noise assessment location	NML (L <sub>Aeq,15min</sub> )
Classrooms at schools and other educational institutions	Internal	45
Places of worship		
Active recreation areas (such as sporting activities and activities which generate their own noise or focus for participants)	External	65
Passive recreation areas (contemplative activities that generate little noise and where benefits are compromised by external noise intrusion, for example, reading, meditation)	External	60
Industrial premises	External	75
Office, retail outlets	External	70

### 3.3 Project construction noise management levels

The Project specific construction noise management levels for residential receivers have been established in line with the ICNG, based on the RBLs relevant to each NCA. These are presented in Table 5. NMLs for non-residential sensitive receivers are described in Table 4.

**Table 5 Project specific construction NMLs**

NCA	Noise Management Level, L <sub>Aeq 15 minute</sub>							
	Approved hours		Outside approved hours				Sleep disturbance (CNVS)	
	Noise affected	Highly noise affected	Day	Evening	Night	Sleep disturbance (CNVS)		
						L <sub>Aeq, 15 minute</sub>	L <sub>Amax</sub>	
1	58	75	53	51	46	46	56	
2	59	75	54	52	42	42	52	

As part of planning for out of hours works, standard mitigation measures, as described in the CNVMP, are implemented where reasonable and feasible. However, after these measures have been applied, noise and vibration levels may continue to exceed the NMLs.

In this case, additional mitigation measures outlined in the CNVS, which largely focus on engagement with affected sensitive receivers, should be implemented where reasonable and feasible, unless other agreements are in place with the impacted receiver.

Triggers and additional mitigation measures for airborne noise are taken from the Project’s OOHV Protocol and summarised in Table 6. Further details of specific additional mitigation measures are described in the CNVS.

**Table 6 Triggers for additional mitigation measures – Airborne noise (Sydney Metro 2020)**

Construction hours	Class	dB above NML	Additional management measures
<b>Approved hours</b> Monday – Friday: 7am – 6pm Saturday: 8am to 6pm	N	0 to 10	-
	CA	10 to 20	LB
	MI	20 to 30	LB, M, SN
	HI	>30	LB, M, SN
<b>Evening</b> Monday – Friday: 6pm – 10pm Saturday: 7am – 8am, 6pm – 10pm Sunday / PH: 8am – 6pm	N	0 to 10	LB
	CA	10 to 20	LB, M
	MI	20 to 30	LB, M, SN, RO
	HI	> 30	LB, M, SN, IB, PC, RO
<b>Night</b> Monday – Saturday: 10am – 7am Saturday: 10pm – 8am) Sunday / PH: 6pm – 7am	N	0 to 10	LB
	CA	10 to 20	LB, M, SN, RO
	MI	20 to 30	LB, M, SN, IB, PC, RO, AA
	HI	> 30	LB, M, SN, IB, PC, RO, AA

Notes: PC = Phone Calls and emails SN = Specific notification  
M = Monitoring LB = Letterbox drops  
IB = Individual briefings RO = Project specific respite offer  
AA = Alternative accommodation

N = Noticeable CA = Clearly audible MI Moderately intrusive HI = Highly intrusive

### 3.4 Vibration management

#### 3.4.1 Human comfort

When assessing human exposure to construction-related vibration, the CNVS requires vibration goals to be established using *Environmental Noise Management Assessing Vibration: A Technical Guideline* (DECC 2006), which provides criteria for the assessment of vibration impacts on humans.

Construction activities typically generate vibration of an intermittent nature, which is assessed using a Vibration Dose Value (VDV). Acceptable values of vibration doses are presented in Table 7 for sensitive receivers.

**Table 7 VDV Vibration criteria**

Receiver type	Low probability of adverse comment (m/s <sup>1.75</sup> )	Adverse comment possible (m/s <sup>1.75</sup> )	Adverse comment probable (m/s <sup>1.75</sup> )
Residential buildings – 16 hour day (7am to 11pm) <sup>1</sup>	0.2 to 0.4	0.4 to 0.8	0.8 to 1.6
Residential buildings – 8 hour night (11pm to 7am) <sup>1</sup>	0.13	0.26	0.51

Note 1: Day time and night time as described in BS6472:1992 (as referenced in the CNVS), i.e. a daytime period of 16 h or a night time period of 8 h, for example 23.00 h to 07.00 h.

#### 3.4.2 Buildings

Potential building damage from construction vibration requires the application of values in BS 7385 Part 2-1993 *Evaluation and measurement for vibration in buildings Part 2*. These values are presented in Table 8 and relate to transient vibration which does not give rise to resonant responses in structures, and to low-rise buildings.

**Table 8 Guideline values for vibration velocity for the effects of short-term vibration on structures (BS 7385).**

Line	Type of building	Peak component particle velocity in frequency range of predominant pulse	
		4 Hz to 15 Hz	15 Hz and above
1	Reinforced or framed structures Industrial and heavy commercial buildings	50	
2	Unreinforced or light framed structures Residential or light commercial type buildings	15 at 4 Hz increasing to 20 mm/s at 15 Hz	20 mm/s at 15 Hz to 50 mm/s at 40 Hz and above

Where vibration may give rise to magnification due to resonance, especially at lower frequencies where lower guide values apply, the guide values may be reduced by 50%. The CNVS describes rock breaking/hammering and sheet piling activities as having potential to cause dynamic loading in some structures (e.g. residences).

For activity involving rock breakers, piling rigs, vibratory rollers, excavators, vibration predominantly occurs at frequencies in the 10 Hz to 100 Hz range. On this basis, a conservative vibration damage screening level is:

- Reinforced or framed structures: 25.0 mm/s
- Unreinforced or light framed structures: 7.5 mm/s

### 3.4.3 Heritage

No heritage structures were identified to be structurally unsound across the WTP. On this basis, a conservative cosmetic damage objectives of 2.5 mm/s peak component particle velocity (from DIN 4150) would not be needed. Instead, the guideline values from Table 8 would be applied.

### 3.4.4 Additional mitigation measures

The CNVS recommends additional mitigation measures where all standard mitigation measures to minimise vibration at the nearest receivers have been implemented and vibration is still predicted to exceed the maximum guideline values. The Additional Mitigation Measures Matrix (AMMM) for vibration from the CNVS is presented in Table 9.

**Table 9 Additional Vibration Mitigation Measures (CNVS)**

Construction hours	Mitigation measures where predicted vibration levels exceed maximum levels
<b>Approved hours</b> Monday – Friday: 7am – 6pm, Saturday: 8am to 6pm	LB, M, RO
<b>Evening</b> Monday – Friday: 6pm – 10pm; Saturday: 7am – 8am, 6pm – 10pm; Sunday / PH: 8am – 6pm	LB, M, IB, PC, RO, SN
<b>Night</b> Monday – Saturday: 10am – 7am Saturday: 10pm – 8am); Sunday / PH: 6pm – 7am	LB, M, IB, PC, RO, SN, AA

## 4 Impact assessment

### 4.1 Modelling method

Predictions of noise impacts were performed using KNOWnoise™, a project-specific noise assessment tool developed by Hutchison Weller for the CTP Project. KNOWnoise calculates the maximum  $L_{Aeq,15\text{minute}}$  noise level for each identified receiver for each proposed activity using predictions from SoundPlan noise modelling software. Predictions include geometric spreading, air and ground absorptions as well as topographical and structural screening and reflection.

The following components were incorporated in the model:

- Topography – Based on terrain data of 1 m resolution.
- Individual sensitive receivers – Worst-affected façade of each building to 700 metres from the works
- Construction noise sources – Activities and equipment provided by GLC were included in the noise model as individual sources across the nominated work areas for each activity. The maximum predicted  $L_{Aeq}$  noise level within each work area was identified for each receiver.
- Cumulative impacts – all activities with overlapping time periods are included in cumulative results
- Source height – construction noise sources assumed to be at 1.5 metres above ground level.
- Ground Absorption – Ground assumed to be mixed hard and soft with absorption factor of 0.5
- Meteorology – worst-case meteorological conditions (gentle breeze from source to receiver and stable conditions).
- Residential building structures are included in the model, meaning screening provided by neighboring houses is considered.
- Results are shown for all floors of assessed buildings with the worst-case façade result assumed for the whole floor.

The sound power levels and ultimate predicted noise levels will depend on the number of plant items operating at any one time and their precise location relative to a sensitive receiver. In practice, the predicted levels will vary due to plant moving around the site and not operating intensively or concurrently for a 15 minute assessment period. Shielding and reflection provided by buildings will also vary as plant moves around the site. Therefore, predicted noise levels are conservative.

This DNVIS has been sectioned as below to assist with interpreting Noise and Vibration Impacts:

- Section 4.2-4.4 - Summarises the predicted noise and vibration impacts by stage of works.
- Appendix A - lists the plant and equipment (including % usage) for each stage of works
- Appendix B - presents the predicted noise impacts visually on a map for each stage of works.
- Appendix C - Provides the noise and vibration impacts for all sensitive receivers affected.

## 4.2 NDD and Footing Excavation (excludes concrete sawing)

### 4.2.1 Predicted noise levels

Predicted impact classes for the Night period are illustrated graphically in Appendix B. Each identified receiver in the study area has been coloured to highlight the predicted level of impact.

Detailed predicted noise levels for each potentially affected receiver are presented Appendix C.

Table 10 presents the worst-case predicted noise level of 87 dB(A) during the works, resulting in 9 receivers classed as highly noise affected.

**Table 10 Summary of maximum predicted noise level and highly affected receivers for the Night period.**

Maximum cumulative predicted $L_{Aeq, 15 \text{ minute}}$ noise level	87 dB(A)
Number of highly noise affected receivers (>75 dB)	9

With reference to the CNVS, the number of sensitive receivers classified in each impact class for each assessment period are summarised in the following tables.

**Table 11 Summary of NML exceedance ranges for standard hours.**

Impact class	Predicted noise level	Predicted number of receivers
Noticable	0 <= 10 dB above NML	31
Clearly Audible	10 <= 20 dB above NML	12
Moderately Intrusive	20 <= 30 dB above NML	5
Highly Intrusive	> 30 dB above NML	0

**Table 12 Summary of NML exceedance ranges for outside standard hours - weekend.**

Impact class	Predicted noise level	Predicted number of receivers
Noticable	0 <= 10 dB above NML	81
Clearly Audible	10 <= 20 dB above NML	18
Moderately Intrusive	20 <= 30 dB above NML	4
Highly Intrusive	> 30 dB above NML	3

**Table 13 Summary of NML exceedance ranges for outside standard hours - evenings.**

Impact class	Predicted noise level	Predicted number of receivers
Noticable	0 <= 10 dB above NML	109
Clearly Audible	10 <= 20 dB above NML	21

Impact class	Predicted noise level	Predicted number of receivers
Moderately Intrusive	20 <= 30 dB above NML	4
Highly Intrusive	> 30 dB above NML	4

**Table 14 Summary of NML exceedance ranges for outside standard hours - nights.**

Impact class	Predicted noise level	Predicted number of receivers
Noticable	0 <= 10 dB above NML	653
Clearly Audible	10 <= 20 dB above NML	85
Moderately Intrusive	20 <= 30 dB above NML	21
Highly Intrusive	> 30 dB above NML	7

In the event works are planned for more than two consecutive nights, sleep disturbance has been considered. Table 15 summarises the number of residents predicted to exceed the sleep disturbance screening criterion. Further analysis is also provided to indicate the number of receivers expected to be woken, at L<sub>Amax</sub> noise levels greater than 65 dBA.

Where exceedances of the awakening criteria are predicted, additional care should be taken, and mitigation measures implemented in line with the CNVS.

**Table 15 Summary of predicted exceedances of sleep disturbance screening criterion and awakening criterion.**

Criterion	Predicted number of receivers
Potentially Sleep Disturbed (exceed RBL + 15 screening criterion)	176
Exceed 65 dBA awakening criterion	26

#### 4.2.2 Vibration

The CNVS requires attended vibration measurements at commencement of vibration generating activities to confirm vibration levels satisfy the criteria for that activity.

There is no vibration impact expected for this stage of works.

**Table 16 Predicted exceedances of vibration criteria**

Impact classification	Number of potentially affected receivers
Human comfort	0
Cosmetic damage	0
Heritage structure	0

### 4.3 Footing Excavation (concrete sawing)

#### 4.3.1 Predicted noise levels

Predicted impact classes for the Night period are illustrated graphically in Appendix B. Each identified receiver in the study area has been coloured to highlight the predicted level of impact.

Detailed predicted noise levels for each potentially affected receiver are presented Appendix C.

Table 17 presents the worst-case predicted noise level of 82 dB(A) during the works, resulting in 7 receivers classed as highly noise affected.

**Table 17 Summary of maximum predicted noise level and highly affected receivers for the Night period.**

Maximum cumulative predicted $L_{Aeq, 15 \text{ minute}}$ noise level	82 dB(A)
Number of highly noise affected receivers (>75 dB)	7

With reference to the CNVS, the number of sensitive receivers classified in each impact class for each assessment period are summarised in the following tables.

**Table 18 Summary of NML exceedance ranges for standard hours.**

Impact class	Predicted noise level	Predicted number of receivers
Noticable	0 <= 10 dB above NML	16
Clearly Audible	10 <= 20 dB above NML	5
Moderately Intrusive	20 <= 30 dB above NML	2
Highly Intrusive	> 30 dB above NML	0

**Table 19 Summary of NML exceedance ranges for outside standard hours - weekend.**

Impact class	Predicted noise level	Predicted number of receivers
Noticable	0 <= 10 dB above NML	29
Clearly Audible	10 <= 20 dB above NML	11
Moderately Intrusive	20 <= 30 dB above NML	4
Highly Intrusive	> 30 dB above NML	0

**Table 20 Summary of NML exceedance ranges for outside standard hours - evenings.**

Impact class	Predicted noise level	Predicted number of receivers
Noticable	0 <= 10 dB above NML	41
Clearly Audible	10 <= 20 dB above NML	13

Impact class	Predicted noise level	Predicted number of receivers
Moderately Intrusive	20 <= 30 dB above NML	5
Highly Intrusive	> 30 dB above NML	0

**Table 21 Summary of NML exceedance ranges for outside standard hours - nights.**

Impact class	Predicted noise level	Predicted number of receivers
Noticable	0 <= 10 dB above NML	273
Clearly Audible	10 <= 20 dB above NML	41
Moderately Intrusive	20 <= 30 dB above NML	12
Highly Intrusive	> 30 dB above NML	5

In the event works are planned for more than two consecutive nights, sleep disturbance has been considered. Table 22 summarises the number of residents predicted to exceed the sleep disturbance screening criterion. Further analysis is also provided to indicate the number of receivers expected to be woken, at L<sub>max</sub> noise levels greater than 65 dBA.

Where exceedances of the awakening criteria are predicted, additional care should be taken, and mitigation measures implemented in line with the CNVS.

**Table 22 Summary of predicted exceedances of sleep disturbance screening criterion and awakening criterion.**

Criterion	Predicted number of receivers
Potentially Sleep Disturbed (exceed RBL + 15 screening criterion)	127
Exceed 65 dBA awakening criterion	21

### 4.3.2 Vibration

The CNVS requires attended vibration measurements at commencement of vibration generating activities to confirm vibration levels satisfy the criteria for that activity.

There is no vibration impact expected for this stage of the proposed works.

**Table 23 Predicted exceedances of vibration criteria**

Impact classification	Number of potentially affected receivers
Human comfort	0
Cosmetic damage	0
Heritage structure	0

#### 4.4 Relocation and rewiring of existing traffic poles

##### 4.4.1 Predicted noise levels -

Predicted impact classes for the Night period are illustrated graphically in Appendix B. Each identified receiver in the study area has been coloured to highlight the predicted level of impact.

Detailed predicted noise levels for each potentially affected receiver are presented Appendix C.

Table 24 presents the worst-case predicted noise level of 73 dB(A) during the works, resulting in 0 receivers classed as highly noise affected.

**Table 24 Summary of maximum predicted noise level and highly affected receivers for the Night period.**

Maximum cumulative predicted $L_{Aeq, 15 \text{ minute}}$ noise level	73 dB(A)
Number of highly noise affected receivers (>75 dB)	0

With reference to the CNVS, the number of sensitive receivers classified in each impact class for each assessment period are summarised in the following tables.

**Table 25 Summary of NML exceedance ranges for standard hours.**

Impact class	Predicted noise level	Predicted number of receivers
Noticable	0 <= 10 dB above NML	5
Clearly Audible	10 <= 20 dB above NML	3
Moderately Intrusive	20 <= 30 dB above NML	0
Highly Intrusive	> 30 dB above NML	0

**Table 26 Summary of NML exceedance ranges for outside standard hours - weekend.**

Impact class	Predicted noise level	Predicted number of receivers
Noticable	0 <= 10 dB above NML	13
Clearly Audible	10 <= 20 dB above NML	5
Moderately Intrusive	20 <= 30 dB above NML	0
Highly Intrusive	> 30 dB above NML	0

**Table 27 Summary of NML exceedance ranges for outside standard hours - evenings.**

Impact class	Predicted noise level	Predicted number of receivers
Noticable	0 <= 10 dB above NML	15
Clearly Audible	10 <= 20 dB above NML	4

Impact class	Predicted noise level	Predicted number of receivers
Moderately Intrusive	20 <= 30 dB above NML	2
Highly Intrusive	> 30 dB above NML	0

**Table 28 Summary of NML exceedance ranges for outside standard hours - nights.**

Impact class	Predicted noise level	Predicted number of receivers
Noticable	0 <= 10 dB above NML	45
Clearly Audible	10 <= 20 dB above NML	16
Moderately Intrusive	20 <= 30 dB above NML	3
Highly Intrusive	> 30 dB above NML	2

In the event works are planned for more than two consecutive nights, sleep disturbance has been considered. Table 29 summarises the number of residents predicted to exceed the sleep disturbance screening criterion. Further analysis is also provided to indicate the number of receivers expected to be woken, at L<sub>max</sub> noise levels greater than 65 dBA.

Where exceedances of the awakening criteria are predicted, additional care should be taken, and mitigation measures implemented in line with the CNVS.

**Table 29 Summary of predicted exceedances of sleep disturbance screening criterion and awakening criterion.**

Criterion	Predicted number of receivers
Potentially Sleep Disturbed (exceed RBL + 15 screening criterion)	44
Exceed 65 dBA awakening criterion	7

#### 4.4.2 Vibration

The CNVS requires attended vibration measurements at commencement of vibration generating activities to confirm vibration levels satisfy the criteria for that activity.

There is no vibration impact expected for this stage of the proposed works.

**Table 30 Predicted exceedances of vibration criteria**

Impact classification	Number of potentially affected receivers
Human comfort	0
Cosmetic damage	0
Heritage structure	0

## 5 Community Impact Management

The Project represents a risk of adverse impacts on sensitive receivers, particularly when working close to the project boundary and outside approved hours.

Where short term noise impacts are unavoidable, mitigation measures described in the CEMP and NVMP should be implemented together with the recommendations in Table 31. Additional mitigation measures for each receiver are identified in Appendix B and summarised in Table 32.

All community and stakeholder management and liaison in relation to these works would be in accordance with the Community Communications Strategy and the Work Specific Communication Plan.

**Table 31 Standard mitigation measures**

Community consultation	<ul style="list-style-type: none"> <li>Potentially affected receivers will be notified of OOH works in accordance with project requirements.</li> <li>Where practicable, works will be scheduled to not conflict with major student examination periods, church congregation times, and other sensitive periods identified through community consultation.</li> </ul>
Site induction	<ul style="list-style-type: none"> <li>All workers will be inducted to the project prior to commencing work and will be cognisant of their noise and vibration obligations under the CNVMP.</li> </ul>
Behavioural practices	<ul style="list-style-type: none"> <li>Avoid swearing and unnecessary shouting or loud radios onsite.</li> <li>Avoid dropping materials from height.</li> </ul>
Equipment selection	<ul style="list-style-type: none"> <li>Priority given to the use of quieter and less vibration emitting construction methods and plant alternatives where feasible and reasonable.</li> <li>The noise levels of plant and equipment would meet the maximum noise requirements of the CNVS.</li> </ul>
Use and siting of plant	<ul style="list-style-type: none"> <li>Locate compounds away from sensitive receivers and discourage access from local roads.</li> <li>Plant used intermittently to be throttled down or shut down.</li> <li>Noise-emitting plant to be directed away from sensitive receivers where possible.</li> <li>Stationary plant should be located behind a structure or enclosed if practicable.</li> <li>Deliveries should be made as far as practical from sensitive receivers. Dedicated loading/unloading sites should be shielded where possible, if close to receivers.</li> <li>Plan traffic flow, parking and loading/unloading areas to minimise reversing.</li> <li>Avoid compression breaking on approach to the site.</li> <li>Where additional activities or plant may result in marginal noise increases and speed works up, consider concentrating activities at one location and complete works as quickly as possible.</li> </ul>
Non-tonal reversing alarms.	<ul style="list-style-type: none"> <li>Non-tonal reversing beepers (or an equivalent mechanism) must be fitted and used on all construction vehicles and mobile plant regularly used on site and for any out of hours work.</li> </ul>
Noise monitoring	<ul style="list-style-type: none"> <li>Monitoring should be completed to verify the assumptions of this CNVIS regarding estimated equipment noise emissions and to ensure compliance with the CNVS.</li> </ul>
Vibration monitoring	<ul style="list-style-type: none"> <li>Attended vibration measurements should be completed at commencement of vibration generating activities predicted to occur within safe working distances for cosmetic damage.</li> <li>Where monitoring demonstrates maximum levels exceeded, consider alternative methodologies/equipment</li> </ul>

**Table 32 Additional mitigation measures**

Code	Measure	
AA	Alternative accommodation	Alternative accommodation options may be provided for residents living in close proximity to construction works that are likely to incur unreasonably high impacts over an extended period of time. Alternative accommodation will be determined on a case-by-case basis.
	Monitoring	Where it has been identified that specific construction activities are likely to exceed the relevant noise or vibration goals, noise or vibration monitoring may be conducted at the affected receiver(s) or a nominated representative location (typically the nearest receiver where more than one receiver have been identified). Monitoring can be in the form of either unattended logging or operator attended surveys. The purpose of monitoring is to inform the relevant personnel when the noise or vibration goal has been exceeded so that additional management measures may be implemented.
IB	Individual briefings	Individual briefings are used to inform stakeholders about the impacts of high noise activities and mitigation measures that will be implemented. Communications representatives from the contractor would visit identified stakeholders at least 48 hours ahead of potentially disturbing construction activities. Individual briefings provide affected stakeholders with personalised contact and tailored advice, with the opportunity to comment on the project.
LB	Letterbox drops	For each Sydney Metro project, a newsletter is produced and distributed to the local community via letterbox drop and the project mailing list. These newsletters provide an overview of current and upcoming works across the project and other topics of interest. The objective is to engage and inform and provide project-specific messages. Advanced warning of potential disruptions (e.g. traffic changes or noisy works) can assist in reducing the impact on the community. Content and newsletter length is determined on a project-by-project basis. Most projects distribute notifications on a monthly basis. Each newsletter is graphically designed within a branded template.
RO	Respite offer	The purpose of a project specific respite offer is to provide residents subjected to lengthy periods of noise or vibration respite from an ongoing impact.
PC	Phone calls	Phone calls and/or emails detailing relevant information would be made to identified/affected stakeholders within 7 days of proposed work. Phone calls and/or emails provide affected stakeholders with personalised contact and tailored advice, with the opportunity to provide comments on the proposed work and specific needs etc.
SN	Specific notifications	Specific notifications would be letterbox dropped or hand distributed to identified stakeholders no later than 7 days ahead of construction activities that are likely to exceed the noise objectives. This form of communication is used to support periodic notifications, or to advertise unscheduled works.

**Implement any project specific mitigation measures**

- In accordance with EPL conditions L5.8(f & h) - undertake any high noise impact works before 12:00am (midnight) where reasonable and feasible. Where high noise impact is to be undertaken after 12:00am (midnight), the licensee is required to submit a written report to the EPA within 2 business days of the activity outlining the justification for continuing high noise impact works after midnight and the reasonable and feasible noise mitigation measures that were implemented to address these night time impacts.
- Consultation with Westmead Public School, via Sydney Metro, which highlighted their preference for works to be undertaken in school holidays, at night, or during off-peak periods to minimise the impact on students and term time. This request has been accepted and is why the works are proposed to occur in the proposed dates and at night.
- Coordination with other nearby projects including Sydney Metro Quick-way (fortnightly meetings)
- Contacted property agent for 123a Hawkesbury Rd, Westmead to discuss movement of power supply to building
- Offer of briefing to Westmead Public School to occur in November 2024 for additional stages of work.
- Inclusion of work details in monthly notifications
- Door knock to nearby residents to outline the scope of works, timing and expected outcomes.
- Specific notification to nearby residents one week before works are due to commence which details opportunities of the affected receivers to submit concerns, questions or other matters related to the works.
- Offers of respite/alternate accommodation to impacted residents one week prior to impactful works
- Out of hours work e-blast in the week prior to works and weekly during the works.
- Noise blankets to be used throughout high noise impact activities and the use of battery or solar powered lighting would be prioritised and implemented where practical.

## Appendix A Proposed activities and associated sound power levels

*Note - dates present the range of days over which the below stages would occur. All stages of works are expected to occur over a total of four days during the school holiday period, subject to ROL's and environmental conditions during the delivery of works.*

### Stage 1A - NDD, Services Search, Trench and Footing Excavations

NDD services search, trench and footing excavations of two new traffic lights, including the installation of the conduit routes. There will be two new routes going in for two new traffic signals. (7 Shifts total)

30/9/2024 10:00:24 PM - 12/10/2024 6:00:58 AM

Equipment	Quantity	Usage	Reduction	SWL
Compactor	1	20%	0	93
Excavator 05 t (300 kg Breaker)*	1	60%	3	112
Hand Tools (electric)	1	10%	0	84
Tipper Truck	1	20%	0	91
Vacc truck	1	60%	0	110
Daymakers / Lighting plant	1	100%	0	93

Activity Sound Power Level: 114

\* includes 5 dB penalty for potentially annoying characteristics in line with the ICNG

### Stage 1B - NDD and footing excavations

Concrete Saw, Stage 1 separated.

30/9/2024 9:28:54 AM - 12/10/2024 6:00:00 AM

Equipment	Quantity	Usage	Reduction	SWL
Concrete Saw (Std)*	1	25%	3	110
Daymakers / Lighting plant	1	100%	0	93

Activity Sound Power Level: 110

\* includes 5 dB penalty for potentially annoying characteristics in line with the ICNG

### Stage 2 - Relocation and Rewiring of Existing Traffic and Light Poles

Intention in the design seems to imply to reuse the existing traffic poles when relocated. A temp light would need to be put in, old poles relocated and wired, then powered on. (2-3 Shifts)

30/9/2024 7:00:59 PM - 12/10/2024 6:00:24 AM

Equipment	Quantity	Usage	Reduction	SWL
Concrete Truck / Agitator - discharging	1	25%	0	93
Hand Tools (electric)	2	50%	0	94
Truck (HIAB)	1	40%	0	97
Daymakers / Lighting plant	1	100%	0	93

Activity Sound Power Level: 101

\* includes 5 dB penalty for potentially annoying characteristics in line with the ICNG

Appendix B Map showing predicted noise impacts by impact class
